Request ID: REQ-004 Generated: 2026-05-12 12:08

User Request

@quotepilot-bom

Quote an NGFW solution for a regional branch office with around 75 concurrent users. The client's IT team specifically asked whether SonicWall has any options in the mid-range tier — they've used SonicWall before and want to see it as one of the options if possible. Include two other vendors as alternatives across the remaining tiers. Lead time is not a concern for this engagement.

DATA FRESHNESS WARNINGS

- VEN-012 SonicWall: effective_date 2025-06-05 is 341 days old as of query date (2026-05-12), exceeding the 60-day freshness threshold by 281 days (rule-002). Pricing and availability for V012-SEC-0001 must be reconfirmed with the vendor before customer delivery. SE acknowledgment required.

RECOMMENDATION

For a 75-user regional branch, the balanced SonicWall option (V012-SEC-0001, \$6,570.84) directly addresses the client's stated vendor familiarity and provides enterprise-edge NGFW throughput appropriate for this site size; however, the 341-day data staleness on SonicWall's catalog record is a material concern that must be resolved before quoting. If SonicWall pricing cannot be confirmed in time, the Check Point budget tier (V009-SEC-0002, \$666.22) offers a clean, low-risk alternative at the branch-NGFW class. The Palo Alto premium tier (V007-SEC-0002, \$11,156.91) is recommended if the client wants a growth-ready platform with SD-WAN and the highest inspection throughput, and it carries no data quality issues. Blended average unit cost across all three tiers is approximately \$6,131; blended average margin is approximately 25.2%.

Tiered Recommendations

BUDGET TIER							
SKU	Vendor	Category	Availability	Lead Time	Unit Cost	Margin	Effective Date
V009-SEC-0002	Check Point Software VEN-009	network-security	In Stock	21 days	\$666.22	27.3%	2026-04-26
<i>Evidence:</i> catalog: VEN-009/V009-SEC-0002 (effective_date: 2026-04-26) · ruleset: rule-001 — lead_time 21d is at the 21d threshold; no breach (noted per normal procedure; lead time not a concern for this engagement) · ruleset: rule-004 — margin_pct 27.3% exceeds 15% floor; compliant · no rule-002, rule-003, or rule-005 conditions fired							

BALANCED TIER

SKU	Vendor	Category	Availability	Lead Time	Unit Cost	Margin	Effective Date
V012-SEC-0001	SonicWall VEN-012	network-security	In Stock	21 days	\$6570.84	23.1%	2025-06-05
Evidence: catalog: VEN-012/V012-SEC-0001 (effective_date: 2025-06-05) · ruleset: rule-002 — vendor data is 341 days old, exceeds 60-day freshness threshold; stale-data warning surfaced; SE must acknowledge before customer-facing use · ruleset: rule-001 — lead_time 21d is at the 21d threshold; no breach (lead time not a concern for this engagement) · ruleset: rule-004 — margin_pct 23.1% exceeds 15% floor; compliant · rule-003 and rule-005 did not fire; SKU is available							

PREMIUM TIER

SKU	Vendor	Category	Availability	Lead Time	Unit Cost	Margin	Effective Date
V007-SEC-0002	Palo Alto Networks VEN-007	network-security	In Stock	14 days	\$11156.91	25.1%	2026-03-24
Evidence: catalog: VEN-007/V007-SEC-0002 (effective_date: 2026-03-24) · ruleset: rule-001 — lead_time 14d is within the 21d threshold; no breach · ruleset: rule-004 — margin_pct 25.1% exceeds 15% floor; compliant · no rule-002, rule-003, or rule-005 conditions fired							

Justification

Budget Tier

Check Point V009-SEC-0002 is the lowest-cost fully clean candidate for the branch-NGFW class, with no rules fired and the strongest margin of the three tiers. It provides 1-5Gbps App-ID throughput appropriate for a 75-user branch and represents a recognized enterprise security vendor distinct from the SonicWall and Palo Alto selections.

- SKU V009-SEC-0002 / VEN-009 Check Point Software; unit cost \$666.22
- Lead time 21d — at the rule-001 threshold, not exceeded; no substitution required; lead time noted per normal procedure and is not a concern for this engagement (rule-001)
- Margin 27.3% — highest of all three tiers, well above the 15% floor (rule-004)
- No rule-002 (freshness), rule-003 (availability), or rule-005 (pricing data) conditions fired; catalog data current as of 2026-04-26
- Trade-off vs. balanced: \$5,904 lower unit cost; branch-tier 1-5Gbps throughput versus SonicWall's enterprise-edge 6-15Gbps profile — appropriate for 75 users but with less headroom for growth

Balanced Tier

SonicWall V012-SEC-0001 is placed in the balanced tier per explicit SE and client preference; it is the only SonicWall NGFW SKU in the catalog and carries an enterprise-edge 6-15Gbps throughput profile well-suited to a 75-user regional branch. The critical caveat is a severe data staleness warning (341 days): pricing and availability should be reconfirmed with SonicWall before this option is presented to the client.

- SKU V012-SEC-0001 / VEN-012 SonicWall; unit cost \$6,570.84
- Lead time 21d — at the rule-001 threshold, not exceeded; lead time noted per normal procedure and is not a concern for this engagement (rule-001)

- Margin 23.1% — above the 15% floor; compliant (rule-004)
- STALE DATA WARNING: VEN-012 effective_date is 2025-06-05, 341 days ago — far exceeds the 60-day threshold (rule-002); requires_human_review set to true; SE must confirm current pricing and availability with SonicWall before customer delivery
- No rule-003 (availability) or rule-005 (pricing data) conditions fired; SKU shows as available in current catalog record, but staleness means this cannot be relied upon without verification

Premium Tier

Palo Alto Networks V007-SEC-0002 is the top-performing NGFW in the filtered candidates: enterprise-edge class with 6-15Gbps throughput and SD-WAN capability, no rules fired, and the fastest lead time of the three tiers at 14 days. It provides the strongest performance headroom and represents the industry-recognized premium NGFW vendor, distinct from both Check Point (budget) and SonicWall (balanced).

- SKU V007-SEC-0002 / VEN-007 Palo Alto Networks; unit cost \$11,156.91
- Lead time 14d — within the 21d rule-001 threshold; no breach; fastest lead time of the three tiers (rule-001)
- Margin 25.1% — above the 15% floor; compliant (rule-004)
- No rule-002 (freshness), rule-003 (availability), or rule-005 (pricing data) conditions fired; catalog data current as of 2026-03-24
- Trade-off vs. balanced: \$4,586 higher unit cost; adds SD-WAN and enterprise-edge throughput over SonicWall's similarly classed appliance — justified if the client anticipates network growth or WAN optimization needs

Status: **Requires SE review before customer delivery**
